

REPO Install Plan — ResistanceZero rz-work

Dibuat: 2026-05-02

Scope: 6 repos untuk integrasi ke rz-work (/home/baguspermana7/rz-work)

Priority Order (Most Immediately Useful First)

#	Repo	Priority	Rationale
1	go-task/task	CRITICAL	install sekarang Langsung berguna hari ini. Replaces manual commands, zero learning curve, no Docker needed.
2	spf13/cobra	HIGH	install minggu ini Bangun `rz` CLI sebagai wrapper Python tools. Berguna setelah Taskfile sudah jalan.
3	chenhg5/cc-connect	HIGH	setelah cobra Mobile control via Telegram – infrastruktur bot sudah ada (@Moldbot#1).
4	Tencent/WeKnora	MEDIUM	saat butuh knowledge search Berguna hanya jika Obsidian vault sudah cukup besar dan sering perlu dicari. Butuh Docker + 8 GB RAM.
5	harness/harness	LOW	fase CI/CD Worth it hanya jika ada 3+ pipelines. Jangan install sampai Taskfile sudah mature.
6	gastownhall/gascity	EKSPERIMENTAL	verifikasi dulu Repo kecil, mungkin tidak aktif. Verify maintenance status sebelum depend.

Prerequisites

Go (required for cobra, task, cc-connect, gascity)

Check if Go is installed
go version
Install Go 1.21+ if not present
sudo apt-get update && sudo apt-get install -y golang-go
Verify
go version

Docker (required for WeKnora, Harness)

Check if Docker is installed
docker --version
docker compose version
Install Docker if not present
curl -fsSL https://get.docker.com sh
sudo usermod -aG docker \$USER
newgrp docker

tmux + jq (required for gascity)

sudo apt-get install -y tmux jq

Combined Installation Sequence (in order)

```

# =====
# STEP 1: go-task/task (NO prerequisites beyond ~/.local/bin)
# =====
sh -c "$(curl --location https://taskfile.dev/install.sh)" -- -d -b ~/.local/bin
task --version

# Initialize Taskfile in rz-work
cd /home/baguspermana7/rz-work
task --init
# Then edit Taskfile.yml – see REPO_task.md for full example
# =====
# STEP 2: spf13/cobra (requires Go)
# =====
go install github.com/spf13/cobra-cli@latest

# Scaffold rz CLI project
mkdir -p /home/baguspermana7/rz-work/tools/rz-cli
cd /home/baguspermana7/rz-work/tools/rz-cli
go mod init github.com/baguspermana7/rz-cli
cobra-cli init
cobra-cli add build
cobra-cli add serve
cobra-cli add deploy

# Build and install binary
go build -o ~/.local/bin/rz .
rz --help
# =====
# STEP 3: chenhg5/cc-connect (requires Go or binary download)
# =====
go install github.com/chenhg5/cc-connect@latest
# OR download binary:
# wget https://github.com/chenhg5/cc-connect/releases/latest/download/cc-connect-linux-amd64 \
# -O ~/.local/bin/cc-connect && chmod +x ~/.local/bin/cc-connect
# Configure (reuse existing TELEGRAM_BOT_TOKEN from ~/.bashrc)
echo 'export CC_PLATFORM=telegram' >> ~/.bashrc
echo 'export CC_ALLOWED_USERS=<your-telegram-user-id>' >> ~/.bashrc
source ~/.bashrc

# Test bridge
cc-connect --help
# =====
# STEP 4: Tencent/WeKnora (requires Docker)
# =====
git clone https://github.com/Tencent/WeKnora.git ~/Apps/weknora
cd ~/Apps/weknora
cp .env.example .env
# Edit .env: set LLM_PROVIDER, API_KEY, PORT=8085 (avoid conflicts)
nano .env

docker compose up -d
# Access: http://localhost:8085
# =====
# STEP 5: harness/harness (requires Docker, port 3000)
# =====
# NOTE: Change dcmoc Next.js dev port first if using 3000
mkdir -p ~/Apps/harness && cd ~/Apps/harness

```

```

curl -O https://raw.githubusercontent.com/harness/harness/main/docker-compose.yml
# Edit docker-compose.yml if port 3000 conflicts with dcmoc
docker compose up -d
# Setup via web UI: http://localhost:3000

# =====
# STEP 6: gastownhall/gascity (requires Go + tmux + jq)
# =====
# VERIFY repo is active before installing:
# Check: https://github.com/gastownhall/gascity/commits/main
go install github.com/gastownhall/gascity@latest
cd /home/baguspermana7/rz-work
gascity init
# Edit city.toml – see REPO_gascity.md for full example

```

Port Allocation (avoid conflicts)

Service	Port	Notes
rz-work HTTP server	8081	`python3 -m http.server 8081`
NemoClaw Docker	8080	`openshell-cluster-nemoclaw`
dcmoc Next.js	3001	(change from default 3000 if Harness installed)
Harness CI/CD	3000	default
WeKnora	8085	set in .env (avoid 8080/8081)
Affiliate site	8082	existing

Which Require Docker

Repo	Docker Required?
go-task/task	NO – single binary
spf13/cobra	NO – compiled Go binary
chenhg5/cc-connect	NO – single binary
Tencent/WeKnora	YES – Docker Compose
harness/harness	YES – Docker Compose
gastownhall/gascity	NO – Go binary (uses tmux)

Roadmap Penggunaan untuk rz-work 2026

Phase 1: Developer Ergonomics (Mei 2026)

Target: Tidak perlu lagi ketik perintah panjang secara manual.

- [] Install go-task/task dan buat Taskfile.yml lengkap di rz-work root
- [] Tasks prioritas: serve, minify, deploy, pln:build, dunia-emosi:deploy
- [] Scaffold rz CLI dengan cobra untuk wrapping Python tools
- [] Tambahkan Taskfile.yml ke git repository

Outcome: Semua daily commands bisa dijalankan dengan task <name> atau rz <command>

Phase 2: Mobile Control (Juni 2026)

Target: Bisa trigger rz-work tasks dari HP via Telegram.

- [] Install cc-connect dan bind ke bot Telegram yang sudah ada
- [] Test basic commands: trigger task minify, check git status, view deploy log
- [] Buat allowlist commands yang aman untuk remote execution
- [] Document di standarization/NEMOCLAW_STANDARD.md

Outcome: Deploy dari HP tanpa buka laptop

Phase 3: Knowledge Base (Juli–Agustus 2026)

Target: Obsidian vault bisa di-query via natural language.

- [] Install WeKnora via Docker Compose
- [] Index seluruh obsidian-knowledge-vault/ + standarization/
- [] Set up task weknora:sync untuk re-index otomatis setelah vault update
- [] Evaluate apakah query quality cukup baik untuk daily use

Outcome: "rzknow 'apa standard auth untuk login modal?'" jawab dalam 2 detik

Phase 4: CI/CD Automation (September 2026)

Target: Push ke git = auto-deploy tanpa manual steps.

- [] Install Harness dan setup local Git mirror
- [] Build pipeline: push → minify → link-check → deploy ke GitHub Pages
- [] Integrate PLN dataset quarterly rebuild sebagai scheduled pipeline
- [] Connect Obsidian vault change detection → WeKnora re-index

Outcome: Zero manual deploy steps

Phase 5: Multi-Agent Development (Oktober 2026+)

Target: Parallel Claude Code agents untuk large refactors.

- [] Verify gastownhall/gascity masih aktif di-maintain
- [] Test dengan small task (3 agents, 10 files)
- [] Buat city.toml template untuk common rz-work tasks
- [] Define agent roles: layout agent, logic agent, QA agent (sesuai Dunia-Emosi pattern)

Outcome: Large refactors selesai 3x lebih cepat dengan parallel agents

Quick Reference: Binary Locations After Install

```
~/.local/bin/task # go-task
~/.local/bin/rz # cobra CLI (custom built)
~/.local/bin/cc-connect # cc-connect
~/go/bin/cobra-cli # cobra scaffolding tool
~/go/bin/gascity # gascity (after step 6)
```

```
~/Apps/weknora/ # WeKnora (Docker Compose)
```

```
~/Apps/harness/ # Harness (Docker Compose)
```

Untuk detail tiap repo, lihat file REPO_<name>.md di folder ini.
